[Press Release]

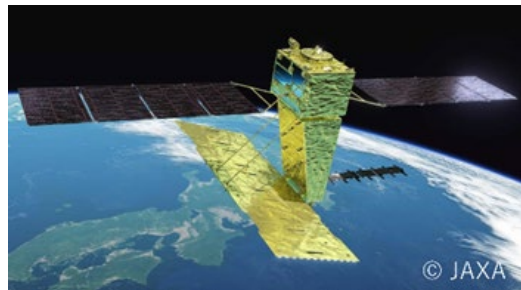

ALOS-4 Satellite Data Utilization Promotion – Offering 10 Free Scenes for Evaluation –

PASCO CORPORATION (Headquarter: Meguro-ku, Tokyo, hereinafter as "PASCO") is a data service provider for the Advanced Land Observing Satellite, "DAICHI-4" (hereinafter as "ALOS-4"), and is offering ALOS-4 satellite data and promoting its usages.

As part of this initiative, we are offering up to 10 free scenes as sample data for evaluating the area of interest for the first time users to access the ALOS-4 satellite data that was released in November 2025. We hope that this opportunity will lead to experience the usefulness of ALOS-4 satellite data.

■ About ALOS-4

Launched in July 2024 as the successor to ALOS-2, it is a Synthetic Aperture Radar (SAR) satellite. It has enhanced observation capabilities of Japan's long-standing L-band SAR technology, particularly in monitoring crustal and land deformation.

■ Provision of Evaluation Sample Data

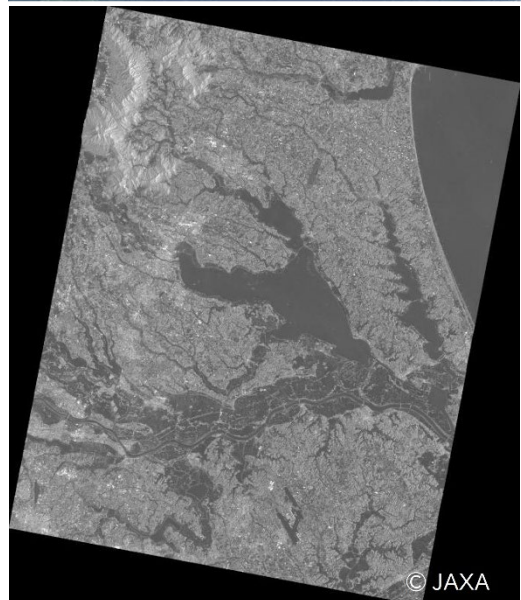

The evaluation sample data will be provided as per-scene basis for each observation mode, up to a maximum of 10 scenes.

[Terms of Use]

The data usage is limited to evaluation (internal use) purpose only and any commercial use, academic presentations, and provision to third parties are prohibited.

[To Apply]

- 1) Placing orders directly on the Satellite Data Utilization Promotion Platform.
<https://satpf.jp/spf/?lang=en>
※An account must be created before placing an order.
※Please make sure to write "Sample" in the request for our product section.
- 2) To place an order while consulting with PASCO.
